

Cardio Training Template

Client Name:	Nathan
Outcome Goal:	Nathan is now in his senior year of football. He has earned positions on the varsity team as starting tight end and linebacker. He helps the team win the division and go to playoffs. He is being considered for a collegiate scholarship.
Process Goals:	Base: One long run improves aerobic endurance, and two workouts of cone drills improve speed, agility, and quickness (SAQ) while enhancing anaerobic conditioning. He will do one high-intensity interval training (HIIT) workout on an assault bike for cross-training and to improve overall conditioning. Build: He will do two workouts of running routes both as a receiver and defender to develop skills, two workouts of cone drills for anaerobic intervals, and one running workout for aerobic endurance. One surfing session or light swimming workout will promote active recovery from training. Taper: Low-intensity agility drills maintain mobility and body control. Jogging and hiking reduce both exercise volume and intensity to allow muscles to fully recover and rest before the upcoming football season. Recover: He will hike, play pick-up basketball with teammates, and swim or surf.
Assessment Considerations:	The overhead squat assessment did not identify any specific muscle imbalances or postural distortions. He regularly does flexibility training, including foam rolling and static stretching, to maintain optimal joint range of motion and performs dynamic stretching prior to workouts to ensure neuromuscular activity and joint motion.

Annual Plan

MONTH	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Phase			Base		Build			Taper	Season		Recover	

Training Phase Starter Workouts

Base Phase

Warm-Up:

For running workouts, self-myofascial release using a foam roller prior to a dynamic warm-up for 30 to 45 seconds for each muscle group of calves, hip flexors, quadriceps, adductors, and latissimus dorsi. Dynamic flexibility includes low-intensity agility drills like high knees, butt kickers, side shuffles, backpedals, and skips before each running workout. For the HIIT workout on the assault bike, start at a slow pace and gradually build intensity over 5 to 7 minutes before the workout.

Workout	Mode	Intensity	Time: Work	Time: Rest	Reps	Notes
1	Cone drills	Zones 3 and 4	15 to 45 sec.	1 to 3 min.	24	Drills will vary in length from 10 to 50 yards with multiple changes of direction. They will be run as fast as possible. The recovery intervals occur while teammates are doing their reps.
2	Long run	Zones 1 and 2	40 to 60 min.	NA	1	Steady-state endurance run to improve aerobic efficiency
3	Cone drills	Zones 3 and 4	15 to 45 sec.	1 to 3 min.	24	Drills will vary in length from 10 to 50 yards with multiple changes of direction. They will be run as fast as possible. The recovery intervals occur while teammates are doing their reps.
4	HIIT Assault bike	Zone 4	20	10	8	One Tabata interval on an assault bike at the highest level of intensity, performed at the end of a strength workout

Build Phase

Warm-Up:

For running workouts, self-myofascial release using a foam roller prior to a dynamic warm-up for 30 to 45 seconds for each muscle group of calves, hip flexors, quadriceps, adductors, and latissimus dorsi. Dynamic flexibility includes low-intensity agility drills like high knees, butt kickers, side shuffles, backpedals, and skips before each running workout. For a long run or endurance workout, start at a walking pace and gradually build up to a slow jog for 5 to 7 minutes before progressing to a steady running pace.

Workout	Mode	Intensity	Time: Work	Time: Rest	Reps	Notes
1	Route running	Stage 4	5 to 20 sec.	30 to 60 sec.	30	He will run half as receiver and half as defender. Routes will vary in length from 5 to 50 yards with multiple changes of direction. They will be run as fast as possible. The recovery intervals occur while teammates are doing their reps.
2	Cone drills	Stages 3 and 4	15 to 45 sec.	45 sec. to 3 min.	30	Drills will vary in length from 15 to 60 yards with multiple changes of direction. They will be run as fast as possible. The recovery intervals occur while teammates are doing their reps.
3	Route running	Stage 4	5 to 20 sec.	30 to 60 sec.	30	He will run half as receiver and half as defender. Routes will vary in length from 5 to 50 yards with multiple changes of direction. They will be run as fast as possible. The recovery intervals occur while teammates are doing their reps.
4	Long run	Stages 1 and 2	40 to 60 min.	NA	1	Steady-state endurance run to improve aerobic efficiency

NASM
NATIONAL ACADEMY OF SPORTS MEDICINE

Taper Phase

Every day during taper, self-myofascial release using a foam roller for two sets of 30 to 45 seconds for each muscle group of calves, hip flexors, quadriceps, adductors, and latissimus dorsi. A static stretch for all of the same muscles to ensure optimal length–tension relationships prior to the start of the football season.
