

Cardio Training Template

Client Name:	Joanne
Outcome Goal:	She enjoyed her first mountain bike race and has joined a mountain biking club, made friends, trains, and races regularly. Joanne is entering her first 50-kilometer mountain bike race, where her goal is to finish in the top 10% of all women, despite age category.
Process Goals:	Base: Two long mountain bike rides a week will develop endurance and riding skills, one high-intensity interval training (HIIT) workout per week will improve anaerobic endurance, and one road cycling ride a week and work on aerobic capacity and leg strength. Build: Two mountain bike rides a week will improve overall aerobic endurance, one shorter mountain bike ride will focus on handling and bike-riding skills, and two days of HIIT will develop anaerobic capacity and improve overall conditioning. Taper: Reduce the volume and intensity of training to allow the body to rest before the challenge of the race. Recover: Use walking and road cycling to allow muscles to recover while maintaining general aerobic conditioning.
Assessment Considerations:	Joanne has an outside sales job and spends a lot of time in her car driving to see clients. The overhead squat assessment identified upper-extremity postural distortion due to tight lats and pecs, which could be caused by driving and the time spent on the mountain bike.

Annual Plan

MONTH	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Phase	Off-season			Base		Build			Taper	Recover		

Training Phase Starter Workouts

Base Phase

Warm-Up:

She will perform self-myofascial release using a foam roller prior to the start of each workout. The focus will be on muscles used in cycling, specifically the calves, peroneals, quadriceps, adductors, piriformis, and hip flexors, for 30 to 45 seconds for each muscle group, both right and left. She will start each cycling ride at a slow pace and gradually increase the speed during the first 8 to 10 minutes of the ride. She will do 3 to 5 minutes of rowing at a gradually increasing pace before starting HIIT on the rowing machine. She will static stretch the latissimus dorsi and pecs prior to the start of each workout.

Workout	Mode	Intensity	Time: Work	Time: Rest	Reps	Notes
1	Mountain bike ride	Stages 2 and 3	90 min.			A long mountain bike ride will build endurance and improve bike-handling skills. Riding on hills is natural interval training between Zones 2 and 3.
2	HIIT workout on a rowing machine	Stage 4	20 sec.	10 sec.	8 (2 sets)	Tabata intervals on a rowing machine will improve anaerobic endurance and use different muscles for cross-training, two sets of 4-minute recovery intervals of steady-state rowing between Tabata intervals.
3	Road cycling	Stage 2	120 min.			Road cycling will improve aerobic endurance, leg strength, and overall conditioning. She will maintain a steady-state pace.
4	Mountain bike ride	Stages 2 and 3	120 min.			A long mountain bike ride will build endurance and improve bike-handling skills. Riding on hills is natural interval training between Zones 2 and 3.

Build Phase

Warm-Up:

She will perform self-myofascial release using a foam roller prior to the start of each workout. The focus will be on muscles used in cycling, specifically the calves, peroneals, quadriceps, adductors, piriformis, and hip flexors, for 30 to 45 seconds for each muscle group, both right and left. She will start each cycling ride at a slow pace and gradually increase the speed during the first 8 to 10 minutes of the ride. She will do 3 to 5 minutes of rowing at a gradually increasing pace before starting HIIT on the rowing machine. She will start with walking and progress to a jog before the HIIT on the self-powered treadmill. She will static stretch the latissimus dorsi and pectorals prior to the start of each workout.

Workout	Mode	Intensity	Time: Work	Time: Rest	Reps	Notes
1	Mountain bike ride (long)	Stages 2 and 3	120 min.			The focus of the long rides is to build endurance and improve bike-handling skills.
2	Mountain bike ride (short)	Stages 2 and 3	45 min.			The focus of the short ride is to improve bike handling and control.
3	HIIT	Stages 3 and 4	20 sec. 30 sec. 40 sec. 40 sec. 30 sec. 20 sec.	40 sec. 30 sec. 20 sec. 20 sec. 30 sec. 40 sec.	2	Using a self-powered treadmill, this ladder interval alternates the length of the work and recovery intervals. She will complete 4 to 6 minutes of active recovery at a walking pace and complete two sets.
4	Mountain bike ride (long)	Stages 2 and 3	3 hours			The focus of the long rides is to build endurance and improve bike-handling skills.
5	HIIT	Stages 3 and 4	30	15	8	Using a rowing machine, she will do eight 30-second intervals followed by 15 seconds of recovery. She will perform 4 to 6 minutes of low-intensity, steady-state rowing and complete a second set of eight 30-second intervals.
