

Ankle Dorsiflexion (Weight-Bearing Lunge Test)

Screening Test	Description
 Ankle dorsiflexion (weight-bearing lunge test)	Client position: • Standing, lunge position, shoes off • Feet straight, heels planted firmly on the ground • Toes positioned approximately 2 inches away from the wall Type of motion: • Passive (forward test leg relaxed) Target motions: • Client's front (test) leg lunges toward the wall, using the hands for support • Look for the ankle and foot to reach their end range • Back foot is positioned to support overall posture Verbal instructions: • "Keep your front foot straight and your heel planted firmly on the ground. Then, lunge forward until the first stretch sensation is felt in the back of your front leg. Avoid pushing with your back leg/foot." Assessment: • Normal mobility: Client is able to touch the wall with the forward-bending knee without compression • Restricted dorsiflexion: Client is unable to touch the wall, or displays impairments such as: ○ Heel lift ○ Foot external rotation ○ Arch collapse ○ Knee valgus ▪ Overactive/shortened: Gastrocnemius and soleus

First MTP (Great Toe) Extension

Screening Test	Description
 First MTP (great toe) extension	Client position: • Standing or seated Type of motion: • Active target motions: ○ Client moves the right big toe upward (extension) as far as possible while keeping the other toes and foot stable ○ Repeat movement with the left big toe Verbal instructions: • “Move your right big toe upward, as far as possible, while keeping everything else still.” • “Repeat on your left side.” Assessment: • Normal mobility: Client is able to extend the big toe above the other toes without compensation • Restricted dorsiflexion: Client is unable to extend the big toe above the others, or displays compensation such as: ○ Movement through the toes ○ Accessory movement through foot and/or tibia ▪ Overactive/shortened: Flexor hallucis longus
