

Bloodwork Questions to Ask a Physician

Questions to ask a physician about bloodwork following the results:

1. Can you discuss what bloodwork marker values are not in range and strategies to mitigate?
2. Are those marker values significant or normal in the context of PED use?
3. What is the current risk to health (if currently using PEDs)? What is the current blood clotting risk?
4. What is the future health risk based on the current and historical bloodwork markers?
5. Is referral required for advanced cardiac screening based on the current and historical lipid panel results?
6. Is referral required for advanced kidney or liver screening based on the current and historical metabolic panel results?
7. Can a urinalysis and specific electrophoresis analysis be performed to support the serum bloodwork?

If the client is currently experiencing a medical issue with specific symptomology, what is the working diagnosis based on the bloodwork, the prognosis, and the treatment avenues?
