

Common Elbow Injuries in Bodybuilding

Injury Type	General Information	Symptoms	Relevant Risk Factors
Lateral/Medial Epicondylalgia ("Tennis" and "Golfer's" Elbow) <i>Adapted from Pemporon/Shutterstock.com</i>	Pain in the tendons on the outside (lateral epicondylitis) or inside (medial epicondylitis) aspect of the elbow that is typically of insidious onset, producing variable losses in function and pain particularly with gripping-related activities.	Pain with gripping and repetitive activities involving the elbow is worse with the elbow extended.	Sudden increases in gripping volume; rotator cuff pathology; carpal tunnel syndrome.
Distal Biceps Tendinopathy <i>Adapted from Designua/Shutterstock.com</i>	Pain in the distal tendon of the biceps brachii as it inserts on the elbow typically of insidious onset.	Pain with resisted elbow flexion that is load-dependent.	Sudden increases in elbow flexion volume; forceful eccentric loading of the elbow flexors.

Common Elbow Injuries in Bodybuilding

Injury Type	General Information	Symptoms	Relevant Risk Factors
Triceps Tendinopathy 	Pain in the back of the elbow where the triceps brachii tendon inserts typically of insidious onset.	Pain with resisted elbow extension that is load-dependent.	Sudden increases in elbow extension volume; forceful eccentric loading of the elbow extensors.
