

Most Effective Dietary Supplements Summary

Dietary Supplement	Dosage	Timing	Effect of supplementation
Whey Protein (Isolate and Concentrate)	20-40 g	As required; every 3-4 hours	Anabolic – protein synthesis
Casein Protein	20-40 g	As required; every 3-4 hours	Anabolic – protein synthesis
Plant-Based Protein	40-50g	As required; every 3-4 hours	Anabolic – protein synthesis
Essential Amino Acids	15g	As required; every 3-4 hours	Anabolic – protein synthesis
L-Citrulline	3.4-4.5g	30 minutes before exercise	Ergogenic – improved blood flow, nitric oxide production
Creatine Monohydrate	3-5g	Daily	Ergogenic – increase phosphocreatine stores, enhanced force and power output, increased strength and recovery, enhanced glycogen synthesis, increased anaerobic threshold, enhanced training adaptations
Beta Alanine	4-6g	Daily	Ergogenic – contributes to Carnosine production, helps control muscle pH, reduces muscular fatigue
Highly Branched Cyclic Dextrin	30-60g	Every 1 hour of intense exercise	Ergogenic – glycogen synthesis
Caffeine	2-3mg/kg	90 minutes prior to exercise	Ergogenic – lipolytic, mental focus
