

Overhead Squat Assessment Observational Findings

OHSA DYNAMIC POSTURAL ASSESSMENT				
View	Kinetic Chain Checkpoint	Movement Impairment	Overactive Muscles *	Underactive Muscles **
Anterior	Foot and Ankle	Turn out	Soleus	Anterior tibialis
			Gastrocnemius	Posterior tibialis
			Hamstrings complex	Gluteus maximus
	Knee	Valgus		Gluteus medius
			Tensor fascia latae (TFL)	Gluteus maximus
			Adductor Complex	Gluteus medius
Lateral	LPHC	Excessive forward trunk lean		Anterior tibialis
				Posterior tibialis
		Low back arches	Soleus	Hamstrings complex
			Gastrocnemius	Gluteus maximus
			Hip flexors	Lumbar extensors
	Shoulders	Arms fall forward	Rectus abdominis	
			External obliques	
			Hip flexors	Gluteus maximus
			Lumbar extensors	Hamstrings complex
			Latissimus dorsi (OHSA only)	Abdominals
			Latissimus dorsi	Middle trapezius
			Teres major	Lower trapezius
			Pectoralis major	Rhomboids
			Pectoralis minor	Posterior deltoids
				Rotator cuff

*Overactive muscles require additional stretching (i.e., foam rolling and/or static stretching) **Underactive muscles require additional neuromuscular activation (i.e., isolated strengthening)
