

Correction Factors for Predicted Maximal Oxygen Uptake

Age (years)	Factor	Maximum Heart Rate (bpm)	Factor
15	1.10	210	1.12
25	1.00	200	1.00
35	0.87	190	0.93
40	0.83	180	0.83
45	0.78	170	0.75
50	0.75	160	0.69
55	0.71	150	0.64
60	0.68		
65	0.65		
Factor to use to correct predicted maximal oxygen uptake when (a) the participant is older than 30–35 years of age or (b) the participant’s maximum heart rate is known. Multiply the factor by value obtained from Maximal Oxygen Uptake Score (Handout 8.2).
