

Hydration Strategies

Before

- Consume water regularly throughout the day, especially before exercise. 500 mL (17 oz) before exercise is encouraged.
 - Assess your hydration status by checking your urine color and checking fasting body weight.
 - Bring water with you to your exercise/training session or performance.
-

During

- Consume 120-180 mL (4-6 oz) of fluid every 15-20 minutes.
 - Utilizing thirst as a signal for drinking
 - If engaging in hard exercise, utilize a systematic approach to hydration.
 - Include additional electrolytes to replace lost electrolytes during hard or extended duration sessions.
 - Utilizing flavored beverages may assist in consuming more liquid.
-

After

- For each kilogram (2.2 lbs.) of body weight lost, 1.5 L (0.4 gal) of fluid should be consumed - again with the addition of 500-700 mg/L of sodium.

Water, milk, and recovery drinks can all be used to replace fluids.
