

Type of Fat	Role/Health Benefit	Food Sources
Monounsaturated fats	• Heart healthy • Notably high in the Mediterranean diet	 • Olives, olive oil • Canola oil • Avocado • Peanuts
Polyunsaturated fats: omega-3 •Eicosapentaenoic acid (EPA) •Docosahexaenoic acid (DHA) •Alpha-linolenic acid (ALA)	• Heart healthy • Lower triglycerides • Associated with improvements in high-density lipoprotein (HDL) cholesterol levels • Reduced inflammation • Associated with improved cognitive function • Associated with a reduced risk of dementia	 • Fatty fish (EPA and DHA): salmon, tuna, sardines, mackerel • Walnuts, flaxseed, chia seeds (ALA) • Fortified milk, fortified eggs (DHA) • Dairy from grass-fed cows (DHA, ALA) • Green vegetables (ALA)
Polyunsaturated fats: omega-6	• Essential for normal growth and development	 • Vegetable oils, nuts, seeds
Saturated fats	• Exact health benefits remain unclear • General recommendations advise limiting excess saturated fats in the diet	 • Animal fats, full-fat dairy, coconut oil, palm oil
Trans fats	• Artificial/added trans fats increase LDL cholesterol and lower HDL cholesterol. They are also associated with increased inflammation and heart disease (Harvard Medical School, 2015) • Naturally occurring trans fats are less harmful than artificial trans fat	 • Artificial/added trans fats are in partially hydrogenated oils and processed foods that contain these oils • Naturally occurring trans fats are found in animal fats and dairy
